

# Suction Box Design Improves Performance of Felt Cleaning

Are your seamed felts mechanically surviving the wear and tear of suction boxes and press nips? The patented leading edges of the Felt-Saver™ wear strips and Seam-Saver® suction box covers can extend the life of your press felts. This is because lubrication shower water is not doctored off and because the area of contact between strips/covers and the felt is reduced.

Is your existing slot width or open area of box wear strips and covers the best design to properly clean and dewater your felts? Is your suction box diameter large enough to handle the design airflow? Are you getting the highest sheet solids possible entering the dryers?

Is your felt design a newer or more open weave requiring a higher suction box airflow?

Our Crockett™ Suction Box is designed for optimum airflow and capacity. Covers and strips in various materials ( UHMW Polyethylene, Ceramic Fill Poly, Ceramic) can be retrofitted to your suction box.
